écentic — Customer KPIs and Analytics

Last updated: 2026-06-02 **Refresh cadence:** Manually weekly until Q3 2026 (when the App Store launch automates instrumentation), then auto-pulled into the dashboard

---

Headline metrics (current state, June 2026)

Metric

Value

Trend

Notes

Paying customers

2

Flat

Dua Flavours, Avatid

MRR

<€500

Up

Below tier base price (early/discounted)

ARR (annualised current MRR)

<€6,000

Up

Modeled to grow to €450K by EoY1

Total accounts (paid + free trial + scan-only)

~15

Up

Most are free-scan-only at this stage

Trial → paid conversion rate

Not yet meaningful

—

Not enough data — App Store launch in Q3 will enable measurement

Active store integrations

2

Flat

Both Shopify; WooCommerce integration live but no customer yet

Simulations run (cumulative)

100+

Up

Across 4 models (GPT-4, Claude, Gemini, Perplexity)

Public UCP validator monthly uses

Tracked weekly post-launch

—

Lead-magnet — visitors enter their domain, get a report

Acquisition metrics

Metric	Target	Measurement plan
Shopify App Store visitors per week	Track from Q3 2026 launch	Shopify App Store analytics dashboard
App Store visitor → install conversion	8–12% (industry benchmark)	Shopify App Store analytics
Install → first scan completion	60% within first session	Internal product analytics (PostHog)
First scan → 14-day trial start	50%	Internal product analytics
Free trial → paid conversion		

30%

Billing data (Shopify Billing or Stripe)

Outbound prospect → discovery call booked

5%

CRM (TBD — currently spreadsheet-based)

Discovery call → pilot or trial

40%

Sales pipeline tracking

Pilot → annual contract (Enterprise)

60%

Manual tracking — small n

Retention metrics

Metric

Target

Cohort window

30-day activation rate

>60% across all tiers

30 days post first paid charge

30-day Net Promoter Score

>40

Surveyed at Day 30

Monthly logo churn (Connect)

<5% steady state

Rolling 90-day average from Q4 2026 onwards

Monthly logo churn (Compete)

<3.5% steady state

Rolling 90-day average

Monthly logo churn (Dominate)

<2% steady state

Rolling 90-day average

Net Revenue Retention (NRR)

>110% at 12 months

First measured Q3 2027

Gross Revenue Retention (GRR)

>90% at 12 months

First measured Q3 2027

Engagement metrics (per active paying customer)

Metric	Target	Notes
Logins in first 14 days	≥5	Activation signal #1
Simulations run per month	Tier-specific cap × 50% utilisation	Connect: 25, Compete: 250, Dominate: 1,000+
Optimizations published per month	≥3	Activation signal #2
Competitors connected (beyond auto-detected 3)	≥2 by Day 30	Activation signal #3
Time to first published optimization	<7 days from install	

Activation signal #4

Win-rate trend visible in dashboard

True by Day 14

Implicit — confirms data is flowing

Revenue quality metrics

Metric

Target

Notes

Annual contracts as % of new ARR

>40% by EoY1

Annual discounts incentivise commitment

Audit revenue as % of total revenue

<20% steady state

Audit is runway-supporting, not the core revenue line

Enterprise ACV (avg)

€37.5K Year 1, growing to €50K+ Year 2

Tracked on contract execution

Tier mix (Connect / Compete / Dominate)

70 / 20 / 10 by customer count

Tracked monthly

Mix shift toward Compete and Dominate over time

NRR via upgrades

Tracked quarterly

Product usage metrics (aggregated, not per-customer)

Metric

Description

Why it matters

Total simulations run (cumulative)

All-time count across all customers

Proxy for dataset depth — proprietary moat

Distinct merchants scanned (cumulative, including free scans)

Includes one-time public UCP validator uses

Proxy for top-of-funnel reach

Average win-rate lift after first optimization

€P50 lift in agent win rate after first publish

Core demonstrable product value

Models updated per quarter

Count of model-version updates that triggered re-simulations

Demonstrates the model-drift moat

UCP profiles auto-generated

Cumulative count

Shows readiness work shipped on behalf of customers

What we publish externally

A subset of these metrics is published in two external channels:

Public dashboard at ecentic.ai/index — aggregate, anonymized: “Average agent win rate across X stores”, “Most common reason agents pick a competitor”, etc. Updated weekly. Lead-capture asset.

Quarterly “State of Agent Commerce” report — deeper analysis, distributed to email list, used as PR and inbound generator. First edition Q4 2026.

Data sources and infrastructure

Product analytics: PostHog (EU region)

Error tracking: Sentry (EU region)

Billing: Shopify Billing for App Store, Stripe for direct customers

Sales pipeline: spreadsheet today, will move to a proper CRM by Q4 2026

Internal dashboarding: ad-hoc queries against PostgreSQL today; a proper internal KPI dashboard ships post-raise (Engineer #2 hire in M6 owns this)

All metrics above are reviewed in the weekly Friday team review and form the basis of the monthly investor update.
