écentic — Customer Journey Map

Last updated: 2026-06-02

The journey is mapped at three altitudes: self-serve (Connect tier), sales-led (Compete and Dominate), and enterprise pilot. Each altitude has a different ladder of states.

Self-serve journey (Connect tier)

Awareness → Trial → First scan → Paid → Activated → Expansion / Churn
Day -∞ Day 0 Day 0 Day 14 Day 30 Day 90+

Awareness (before they meet écentic)

Merchant sees a YouTube tutorial mentioning écentic, or reads a blog comparing agent-commerce tools, or sees écentic in the Shopify App Store search results

They visit ecentic.ai and either install directly or run the free UCP validator

Question we answer: "Is this for someone like me?"

Trial (Day 0)

Merchant installs the écentic Shopify app

OAuth handoff completes; catalog syncs in 2–5 minutes for a typical 100–500 SKU store

14-day free trial begins automatically

First scan (Day 0, within 10 minutes of install)

Merchant runs their first agent commerce simulation against 3 auto-detected competitors

Receives an Agent Replay report showing exactly why each model picked the winner

The "aha" moment: they see GPT-4 explain in plain English why their listing lost. They didn't know this was visible before.

Paid conversion (Day 14)

Trial expires; merchant decides to enter card or churn

Target conversion: 30% trial → paid Connect

Activated (Day 30)

Merchant has logged in ≥5 times

Optimized at least 5 listings via the one-click publish flow

Connected at least one additional competitor beyond the auto-detected three

Health signal: customers who hit all three activation criteria churn at <2%/month; customers who don't hit any churn at ~12%/month

Expansion / Churn (Day 90+)

Customer connects more competitors → in-product prompt to upgrade to Compete (3 → 10 competitors)

Customer hits simulation cap → in-product prompt

Customer requests Agent Replay (locked feature on Connect) → in-product upgrade flow

Net 90-day churn target: 5%

Sales-led journey (Compete and Dominate)

Outreach → Discovery → Pilot → Contract → Onboarding → Expansion
Week 0 Week 1 Week 2-4 Week 5 Week 6-10 Week 12+

Outreach (Week 0)

GTM Lead identifies prospect (App Store install signal, inbound, outbound list, agency referral, Plug and Play)

Pre-call: free scan run on prospect's catalog before any contact

First outreach: cold email or LinkedIn DM with one specific finding from the scan

What lands: "I noticed your hero product loses 7/10 times to [competitor] on GPT-4 — happy to send the full scan if useful."

Discovery (Week 1, 30-minute call)

Discovery questions from the sales playbook

Demo on the prospect's actual catalog

Close with specific next step (full scan report, pilot proposal, technical scope call)

Pilot (Week 2–4)

30-day free trial (Compete) or 90-day pilot (Dominate)

Onboarding: 1-hour kickoff call, catalog imported, first optimization shipped

Weekly check-in with two named business stakeholders

Weekly delta report: win-rate change, traffic shift, top-3 fixes published

Contract (Week 5)

Annual contract proposed at 15–20% discount vs. month-to-month

Standard customer agreement used (Compete); Dominate gets counter-signature

Procurement / security review handled where applicable (Vendor Security Questionnaire pack available on request)

Onboarding (Week 6–10)

Slack channel opened between écentic CS and customer team (Dominate only)

All competitors loaded

Persona-based simulation configured (Dominate only)

Model-drift alerts active

Activation success criteria hit by end Week 10

Expansion (Week 12+)

Customer adds more stores → multi-store pricing kicks in

Customer adds API access (Dominate)

Customer commissions a catalog audit (one-time fee)

Net 12-month revenue retention target: 110%

Enterprise pilot journey (Tier C, custom-priced)

This is the 12-week structured pilot framework as already specified in the sales WIP deck:

Scope	Baseline	Optimize	Measure
Week 1-2	Week 3-4	Week 5-8	Week 9-12

Scope (Week 1–2)

Partner-specific KPI defined in writing (e.g., “lift agent-driven win rate on top 200 SKUs by 8 percentage points by end of pilot”)

Catalog or SKU subset connected

Access and security review completed

Output artifact: signed pilot scope document, forwardable internally at the partner

Baseline (Week 3–4)

Full simulation across all four models on the agreed SKU subset

Agent-traffic instrumentation live

Baseline win-rate report delivered to the partner

Output artifact: Baseline Agent-Readiness Report (PDF, 8–12 pages)

Optimize (Week 5–8)

Top-priority diagnostics shipped

First batch of listing optimizations published

Weekly delta report delivered to the named business stakeholders

Output artifact: Weekly Optimization Log (live document)

Measure (Week 9–12)

After-vs-before win-rate lift measured

Agent-traffic delta by model reported

Joint executive readout + scaling decision presented to the partner's leadership

Output artifact: Pilot Outcome Report + Scaling Proposal (the latter optional, used to convert pilot → annual contract)

Post-pilot

Case study + co-branded agent-readiness benchmark report (optional, partner-approved)

Annual contract proposed at €25K–€75K Year 1 ACV depending on scope

Multi-year contract with annual price step proposed for Year 2+

Touchpoints across all journeys

What we measure on the journey

Internal metrics tracked weekly per cohort:

Time to first scan (target: < 10 minutes from install)

Time to first paid month (target: < 21 days from install for Connect)

30-day activation rate (target: > 60% across all tiers)

NPS at Day 30 (target: > 40)

Net Revenue Retention at Day 365 (target: > 110%)

Customer lifetime value (LTV) (target by tier in the Unit Economics tab of the financial model)

CAC payback period (target: < 12 months)
