écentic

Making sure you win the cart, when AI does the shopping.

20% of all Black Friday shopping was done by AI Agents, but today,
90% of stores aren't even checkout-able

What we do?

1 Making your store AI trustable

We implement UCP, the new commerce protocol that lets AI agents transact with your catalog. Most stores still can't. We make yours one of the few that can.

2 Keeping your store winning

We simulate ChatGPT, Gemini, Claude and Perplexity shopping your products against competitors. We diagnose why you lose, rewrite the listing, and publish the fix back to your store.

How it works?

1 Connect

One-Click Shopify install.
Catalog synced in minutes.

2 Simulate

Every SKU shopped by GPT-4, Claude & more.

3 Diagnose

Agent Replay shows exactly why you lost the cart

4 Publish

AI rewrites the listing and ships straight to your store
